

Getting Started

Onboarding guide for the Laundry backend.

What this is

A NestJS API with:

- **PostgreSQL** via Prisma ([prisma/schema.prisma](#))
- **Redis** for BullMQ job queues, the rate limiter ([@nestjs/throttler](#)), and caching
- **Sentry** for error tracking (optional locally)
- **i18n** responses ([en](#), [lo](#), [zh](#), [th](#))
- Swagger docs, health checks, Prometheus metrics, and a Bull Board queue dashboard

1. Install

```
npm install
```

2. Configure environment variables

Create a `.env` file in the project root (it's gitignored, so it's never committed). Required keys:

```
PORT=3030
DATABASE_URL="postgresql://<user>:<password>@localhost:5432/laundry_db?
options=-c%20timezone%3DUTC"
REDIS_URL=redis://localhost:6379
JWT_ACCESS_SECRET=<generate-a-random-secret>
JWT_REFRESH_SECRET=<generate-a-random-secret>
JWT_ACCESS_TTL=15m
JWT_REFRESH_TTL=7d
SENTRY_DSN=
SMS_GATEWAY_URL=
PUSH_PROVIDER_URL=
```

3. Set up the database

Generate the Prisma client and apply migrations:

```
npx prisma generate
npx prisma migrate dev
```

4. Run the app

```
npm run start:dev
```

The API listens on **PORT** from **.env** (defaults to **3030** in the example above; falls back to **3000** if unset).

Once running, check:

- Swagger UI: <http://localhost:3030/docs>
